

BIOMASS GAS ANALYZER

DATA SHEET

ZPAF

This gas analyzer (ZPAF) can simultaneously measure the concentration of CH_4 , CO_2 , H_2S and O_2 components in sample gas. CO_2 and CH_4 are measured by non-dispersion infrared method (NDIR), O_2 is measured by fuel cell , and H_2S is measured by constant-potential electrolytic method. ZPAF provides high-stability and ease-of-maintenance incorporated into a space-saving design. all these features make ZPAF ideal for biogas plants.

FEATURES

- 1. Compact and lightweight 133 (H) × 483 (W) × 382 (D) mm, 9 kg
- Easy maintenance Thanks to the use of single-beam system, optical adjustment is not required.
- **3. User-friendly operation** Clear and easy-to-read display facilitates operation.
- 4. Extensive functions

Various optional functions are available such as auto calibration control, high and low concentration alarms, remote range switch, and range identification signal, etc.

SPECIFICATIONS

Standard Specifications

Principle of measurement:

 CH_4 , CO_2 ;

Non-dispersion infrared-ray absorption method

Single light source and single beams (single beam system)

- O₂ ;Fuel cell O₂ analyzer
- H₂S ;Constant-potential electrolytic method

Measurable gas components and measuring range:

	1st range	2nd range
CH ₄	0 - 20 vol%	0 - 100 vol%
CO ₂	0 - 20 vol%	0 - 100 vol%
H ₂ S	0 - 500 ppm	0 - 2000 ppm 0 - 5000 ppm
$ \begin{array}{c} O_2 \\ \left(\begin{array}{c} Built \ in \\ fuel \ cell \end{array}\right) \end{array} $	0 - 10 vol%	0 - 25 vol%

- Max. 4 components ncluding O₂.
- Two measurement ranges are provided for each component, and a user can switch between them.

Measured value indication:

Digital indication in 4 digits

🛚 Fuji Electric Co., Ltd. 💻

- (LCD panel with LED back light)
- Instantaneous value of each component

4 to 20mA DC or 0 to 1V DC, isolated internally from circuit and ground. Output

internally from circuit and ground. Output lines are non-isolated each other.; 12 outputs max.

Allowable load 550 Ω for 4 to 20mA DC Allowable load 100K Ω for 0 to 1V DC

Digital output: (Option)

Analog output signals:

1c contact (24V DC/1A, resistive load) max.15 outputs

Instrument error, calibration error, range identification, auto calibration status, solenoid valve drive for auto calibration, High/Low limit alarm contact output.

* All relay contacts are isolated mutually and from the internal circuit.

Digital input: (Option)

Voltage contact (supply 12-24V DC (15mA Max.)) Max. 9 inputs

Remote range change over, auto calibration remote start, remote hold, Isolated from the internal circuit with photocoupler.

Power supply:	Voltage rating	; 100V to 240V AC
	Allowable range	; 85V to 264V AC
	Frequency	; 50Hz/60Hz
	Power consumption	; 100VA max.

Ambient	temperature:	
	5°C to	10°

5°C to 40°C (CH₄, CO, and 0-2000 ppm H₂S analyzers)

15°C to 40°C (other than the above)

```
Ambient humidity:
```

90% RH max., no condensation

Storage conditions:

Ambient temperature ; -20°C to 50°C Ambient humidity ; 90% RH max., non-condensing

Dimensions $(H \times W \times D)$:

	133 x 483 x 382mm
Mass:	Approx. 9 kg max.
Finish color:	Front panel; Cool gray (PANTON 1C-F)

EDS3-162 Date Feb. 28, 2018

Enclosure: Steel casing, for indoor use Material of gas-contacting parts:

Gas inlet/outlet; SUS304 Sample cell; SUS304,chloroprene rubber Infrared-ray transmitting window; CaF2 Internal piping;Toaron,Teflon, Polypropylene

Solenoid valve: SUS316, fluororubber Fuel cell O₂ analyzer cell : ABS resin

Gas inlet/outlet: Rc1/4 or NPT1/4 internal thread

- Analyzer purge gas flow rate: 1L/min (Analyzer purge with N_2 or air is indispensable)
- Life time of fuel cell O2 analyzer: 2 years
- Life time of constant-potential electrolytic H₂S sensor: 1 year (under an average ambient temperature of 35° C)

Standard Functions

Output signal holding:

- Output signals are held unchanged during manual and auto calibrations by activation of holding (turning "ON" its setting). The values held are those just before start calibration mode or setting value. Usage is selectable. Indication of instantaneous values will not be held. Switch ranges: The switch ranges function is available in manual, auto, and remote modes. Only preset switch method is effective. Manual: Allows range to switch by key operation. Auto: Automatically switched from first range to second range when the measured value exceeds 90%FS of first range. Automatically switched from second range to first range when the measured value drops to 80% or less first range. Remote: Voltage contact input (Option) Allows range to switch via an external
 - signal when remote range switch input is received. When the contact input terminals for

each component are input voltage, the first range is selected, and it is switched to the second range when the terminals are open.

* These switch range value are settable between the first range and second range values (low/high range values).

Optional Functions

Remote output holding:

Output signal is held at the last value or preset value by voltage input to the remote output holding input terminals. Holding is maintained while the voltage is input to the terminals. Indication of instantaneous values are not held.

Range identification signal:

The present measuring range is identified by a contact position.

The contact output terminals close for each component when the first range is selected, and open when the second range is selected.

Auto calibration:

Auto calibration is carried out periodically at the preset cycle.

When a standard gas cylinder for calibration and a solenoid valve for opening/ closing the gas flow line are prepared externally by the customer, calibration will be carried out with the solenoid valve drive contacts for zero calibration and each span calibration turned on/off sequentially at the set auto calibration timing.

Auto calibration cycle setting:

Auto calibration cycle is set.

Setting is variable within 1 to 99 hours (in increments of 1 hour) or 1 to 40 days (in increments of 1 day).

Gas flow time setting:

The time for flowing each calibration gas in auto calibration is set.

Settable within 60 to 900 seconds (in increments of 1 second)

Auto calibration remote start:

Auto calibration starts by opening the auto calibration remote start input terminal after short circuiting for 1.5 sec or longer. Auto calibration starts when contacts open.

Auto zero calibration:

Auto zero calibration is carried out periodically at the preset cycle.

This cycle is independent from "Auto calibration" cycle.

When zero calibration gas and solenoid valve for opening/closing the calibration gas flow line are prepared externally by the customer, zero calibration will be carried out at the set auto zero calibration timing.

Auto zero calibration cycle setting:

Auto zero calibration cycle is set.

Setting is variable within 1 to 99 hours (in increments of 1 hour) or 1 to 40 days (in increments of 1 day)

Gas flow time setting:

The timing for flowing zero gas in auto zero calibration is set.

Settable within 60 to 900 seconds (in increments of 1 second)

High/low limit alarm:

Alarm contact output turns on when measurement value reaches the preset high or low limit alarm value.

Contacts close when the instantaneous value of each channel exceeds the high alarm limit value or falls below the low alarm limit value.

Instrument error contact output:

Contacts turn on at occurrence of analyzer error No. 1, 2, 3 or 10.

Calibration error contact output:

Contacts turn on at occurrence of manual or auto calibration error (any of errors No. 4 to 9).

Auto calibration status contact outputs:

Contacts turn on during auto calibration.

Communication function:

RS-485 (9pins D-sub connector) Half-duplex bit serial Start-stop synchronization Modbus RTU™ protocol Contents : Read/Write parameters Read measurement concen-

Remark : When connecting via RS-232C interface, an RS-232C ↔ RS-485 converter should be used.

Performance

Repeatability:	±0.5% of full scale (H ₂ S: ±2.0 %FS)
Linearity:	$\pm 1\%$ of full scale (H ₂ S: $\pm 2.0\%$ FS)
Zero drift:	±2% of full scale/week
Span drift:	±2% of full scale/week
	*H ₂ S analyzer (0-2000 ppm range): ±2.5 %
	of FS/week)

*H₂S analyzer (0-5000 ppm range): ±5 % of FS/day)

Response time (for 90% FS response) :

1 to 15 sec electrical response. Within 10-30 seconds including replacement time of sampling gas.

- *H₂S analyzer (0-2000 ppm range): within 180 s
- *H₂S analyzer (0-5000 ppm range): within 300 s

EU Directive Compliance (€

LVD (2014/35/EU) EN 61010-1 EN 62311 EMC (2014/30/EU) EN 61326-1(Table 2) EN 55011(Group 1 Class A) EN 61000-3-2(Class A) EN 61000-3-3 EN61326-2-3 RoHS (2011/65/EU) EN 50581

Requirements for Sample Gas

Flow rate:	0.5 \pm 0.2L / min (including purge gas for
	H ₂ S measurement)
Temperature:	10 to 50°C
Pressure:	10 kPa or less (Gas outlet side should be
	open to the atmospheric air.)
Dust:	100 µg/Nm ³ or less in particle size of 0.3
	µm or smaller
Mist:	Unallowable
Moisture:	Less than the content saturated at 2°C
Corrosive compo	onent: 1 ppm or less
(H ₂ S scrubber is r	equired on pipings for NDIR and O2 mea-

surement.)

Standard gas for calibration:

1) Infrared-ray measurable component, standard O₂

- Zero gas ; Dry air
- Span gas ; Each sample gas having concentration 90 to 100% of its measuring range (recommended).
- 2) H₂S measurement
 - Zero gas: air *

Span gas: concentration of 90 to 100 % of its measuring range

Purge gas: air *

*Use moist air saturated at the temperature from 2°C through room temperature. Do not use air which includes H₂S nor dry air saturated below 2°C.

Installation Requirements

- Indoor use (Select a place where the equipment does not receive direct sunlight, draft/rain or radiation from hot substances. If such a place cannot be found, a roof or cover should be prepared for protection.)
- Avoid a place where unit receives heavy vibration
- Select a place where atmospheric air is clean
- Analyzer purge with N2 or air is indispensable.
- Handle H₂S with great care as it is toxic, flammable, and corrosive.
- For safety, install an H₂S alarm around the analyzer.

Items to be Prepared Saparately

- Constant-potential electrolytic H₂S sensor (for replacement): TQ503691C1 (for 0-2000 ppm range) TQ503691C3 (for 0-5000 ppm range)
- Galvanic O2 sensor (for replacement): TQ503691C2

Principle diagram of constant-potential electrolytic measurement (For H₂S)

Principle diagram of H₂S measurement

As the H₂S sensor uses constant-potential electrolytic method, there must be oxygen included in the sample gas. Therefore, air is supplied to the sensor at regular intervals to enable gas analysis in biogas plants where oxygen is absent, and thus stable readings are provided.
