

**Fuji Electric
Instrumentation & Control
for Car Wash Applications**

Integral Ultrasonic Flowmeter S-Flow (FSZ)

Easy installation with space savings! Flow rate is “visualized” using our long-cultivated ultrasonic technologies. This contributes to energy savings and production process solutions. Our S-Flow Flowmeter provides easy clamp-on type by simply tightening 4 screws, no need for pipe modification, integrated detector and flow transmitter, and built-in temperature sensor enables simultaneous measurement of flow rate and temperature (optional).

We provide Instrumentation devices that improve car wash operations.

- **Reduces labor hours and installation costs:** Clamp-on type requires no pipe modification. It can be installed without stopping equipment. Easy installation using a single screwdriver.
- **Easy Set Up:** Configurable only with three buttons. Simply turn on, configure four settings, and start measuring immediately. No need to store grease for maintenance purposes.
- **Integral Compact Design:** Flow transmitter and detector functions are integrated to achieve compact dimensions.

- **Easy-to-read LED display:** Easy-to-read, intuitive 2-row LED display. Front function keys allow for easy operation. Can be installed on densely-spaced piping and inside of equipment

Save On

- Total water usage
- Soap and Chemical usage amounts
